Recognize the legal framework and best practices for aligning privacy and security equities.

WHO SHOULD ATTEND

Corporate security, risk, legal, and privacy professionals involved with developing or managing an insider risk program. Stakeholder managers in the CISO, CSO, CRO, CPO, or GC departments.

Advanced insider risk solutions are essential for achieving true business resilience.

True business resilience requires more than focusing only on operational risks caused by data breaches and network intrusions. Insider risks must also be identified, contingencies considered, scenarios evaluated, and response capabilities developed to provide true business resilience. As the workplace continues to evolve to remote workplaces, achieving resilience becomes more challenging and the traditional means of managing insider risk are ineffective. A new model is required that shifts the priority to the insiders' *interaction* with company data. This course will teach you ITMG's proven and effective **RiskTKO™** model that is used by leading Fortune 500 companies to manage their insider risk. This course will provide immediate ROI by teaching you proven methods to:

- ✓ **Identify.** Gain insight on how to focus your insider risk management program by efficiently identifying critical assets, the insider population, and existing security controls.
- ✓ **Assess.** Learn how to baseline your existing insider risk management capabilities and how to develop the necessary foundation.
- ✓ **Define.** Explore insider risk management program strategies, governance structures, and frameworks.
- ✓ **Build.** Understand how to develop insider risk management requirements, tasks, milestones, and roadmaps and how to align them with applicable business objectives using a risk-based approach.
- ✓ **Implement.** Acquire the knowledge to operationalize your insider risk management program by leveraging tools and risk-based procedures and workflows.

An opinion is only worth the experience that supports it.
